DETAILED ACTION

1. Claims 1, 6-22 and 33 are pending. The Examiner acknowledges cancelled claims 4 and 23-32. Claims 2, 3, and 5 were previously cancelled.
2. Applicant's amendments and arguments filed on 21 October 2009 have been fully considered and they are deemed to be persuasive.

EXAMINER'S AMENDMENT

3. Authorization for Examiner's Amendment to the amendment filed 21 October 2009 was given by Mr. John Meline (Reg. No. 58,280) in a telephone interview on 02 November 2009.
4. An examiner's amendment to the amendment filed 21 October 2009 appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
5. The application has been amended as follows:
 1. (Currently Amended) A method comprising:

receiving an input of data, the input data conforming to a query language used by a filter engine comprising two or more filter sub-engines, wherein at least one filter sub-engine is a general filter sub-engine and at least one filter sub-engine is an optimized

filter sub-engine, and wherein the query language is based on eXtensible Markup Language (XML), wherein the query language is XPath;

determining whether the input data conforms to a grammar associated with the optimized filter sub-engine, wherein the optimized filter sub-engine is configured to handle only a subset of the query language handled by the general filter sub-engine;

in an event the determining indicates the input data conforms to the grammar associated with the optimized filter sub-engine;

determining whether the input data can be processed by the optimized filter sub-engine, the determining comprising identifying if the input data comprises a subset of the query language; and

directing the input data to the optimized filter sub-engine for processing;
in an event the determining indicates that the input data cannot be processed by the optimized filter sub-engine;

determining whether the input data can be processed by a second optimized filter sub-engine, wherein the second optimized filter sub-engine is configured to handle only a subset of the query language, and wherein the subset of the query language that the second optimized filter sub-engine is configured to handle excludes the subset of the query language that the first optimized filter sub-engine is configured to handle; and

directing the input data to the second optimized filter sub-engine for processing;

in an event the determining indicates that the input cannot be processed by the second optimized filter sub-engine, directing the input to the general filter sub-engine for processing, wherein the general filter sub-engine is configured to handle all aspects of the query language; and

processing the input to derive a result.

8. (Currently Amended) A filter engine system comprising:

a processor coupled to a memory, the memory configured with instructions for implementing;

an optimized filter sub-engine configured to accept an input that conforms to a language and process the input against a filter table associated with the optimized filter sub-engine, wherein the optimized filter sub-engine is configured to process only a subset of terms of the language, wherein the subset of terms of the language does not include all terms of the language, and wherein the language comprises a query language based on eXtensible Markup Language (XML), wherein the query language is XPath;

a general filter sub-engine configured to accept the input and process the input against a filter table associated with the general filter sub-engine, wherein the general filter sub-engine is configured to process all terms of the input language; and

an analyzer configured to determine whether the input can be processed by the optimized filter sub-engine and, if so, direct the input to the optimized filter sub-engine for processing, or if not, direct the input to the general filter sub-engine for processing.

15. (Currently Amended) A computer-readable storage medium encoded with instruction that, when executed by a processor of a device, causes the device to perform acts comprising:

determining an appropriate filter sub-engine to which an input message should be directed for processing against a set of queries;

processing the input message using an optimized filter sub-engine if the optimized filter sub-engine comprises a grammar that supports processing of the input message;

processing the input message in a general filter sub-engine if the optimized filter sub-engine grammar does not support processing of the input message; and

wherein:

the input message is in accordance with a query language based on eXtensible Markup Language (XML), wherein the query language is XPath;

the optimized filter sub-engine supports a subset, less than the whole, of the query language; and

the general filter sub-engine supports the entire query language.

Allowable Subject Matter

6. Claims 1, 6-22 and 33 and renumbered 1-19 are allowed over the prior art of record.

Reasons For Allowance

7. The following is an examiner's statement of reasons for allowance:

Regarding independent claims 1, 8, and 15, Applicants particular method, associated systems, and computer-readable storage medium of receiving an input of data, the input data conforming to a query language used by a filter engine comprising two or more filter sub-engines, wherein at least one filter sub-engine is a general filter sub-engine and at least one filter sub-engine is an optimized filter sub-engine, and wherein the query language is based on eXtensible Markup Language (XML), wherein the query language is XPath; in an event the determining indicates the input data conforms to the grammar associated with the optimized filter sub-engine; determining whether the input data can be processed by the optimized filter sub-engine, the determining comprising identifying if the input data comprises a subset of the query language; and directing the input data to the optimized filter sub-engine for processing; in an event the determining indicates that the input data cannot be processed by the optimized filter sub-engine, was not disclosed by, would not have been obvious over, nor would have been fairly suggested by the prior art of record.

The dependent claims, being further limiting to the independent claims, definite and enabled by the specification are also allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
